

Sergio Camiño Regueiro

Fullstack Engineer

Fullstack engineer with 5+ years of experience shipping web and mobile applications across startups, enterprise, and freelance. I work primarily with React, TypeScript, and Node.js and own features end-to-end — from database schema to production UI. Available for freelance and contract work.

Experience

2024 - Present

Fullstack Engineer - Osapiens

Delivering fullstack features for an ESG compliance platform used by enterprise clients to meet sustainability reporting requirements. Working across a React frontend and Node.js backend in a continuous delivery environment.

React · TypeScript · Node.js

2024

Freelance - Pit Stop Recycling

Contracted to build a mobile logistics app for a recycling company — driver route management, pickup scheduling, and inventory tracking. Ran the project solo: scoped requirements with the client, designed the data model, and delivered the full product.

React Native · TypeScript · Supabase

2022 - 2024

Frontend Engineer - SICE

Designed and shipped a shared React component library from scratch that became the standard across multiple teams and international projects. Built the customer-facing web app for the M6 motorway tolling system (UK) and a back-office tool for a client in New Zealand.

React · TypeScript · MUI · Jest · TanStack Query

2021 - 2022

Freelance - GoTo Global

Contracted to build a pricing calculator and admin back-office for a car rental company. Scoped both tools with the client, built and shipped them independently.

JavaScript · Node.js

2020 - 2022

Freelance - Bumerang (now Vytal)

Sole developer at an early-stage startup. Migrated the backend to a hexagonal architecture, improving testability and decoupling business logic from infrastructure. Built two iterations of the mobile app (iOS & Android) and all internal admin tooling.

React · TypeScript · Node.js · PostgreSQL · Prisma · Ionic · Jest · AWS S3
